ENSURE – European Sustainable Urbanisation through port city REgeneration

ENSURE

Why this project?

- Despite overall growth in maritime transport, many European port cities experience the relocation of port-related activities out of their city. The changing nature of the port-city relationship creates specific development challenges.
- ENSURE will provide a repository of good practice for implementing sustainable port city regeneration in small/medium European cities.

Key policy questions:

- How are port cities **impacted** by relocation of port services, economically, socially and environmentally?
- How does **regeneration affect** the economic performance and identity of the city and its wider region?
- What are the **main challenges and risks** to be considered?
- How can **policy support** smaller port city regeneration?

ENSURE

Stakeholders involved:

- Cork City Council, IE
- City of Aalborg, DK
- Brest Metropole, FR
- Municipality of Catania, IT

Time table:

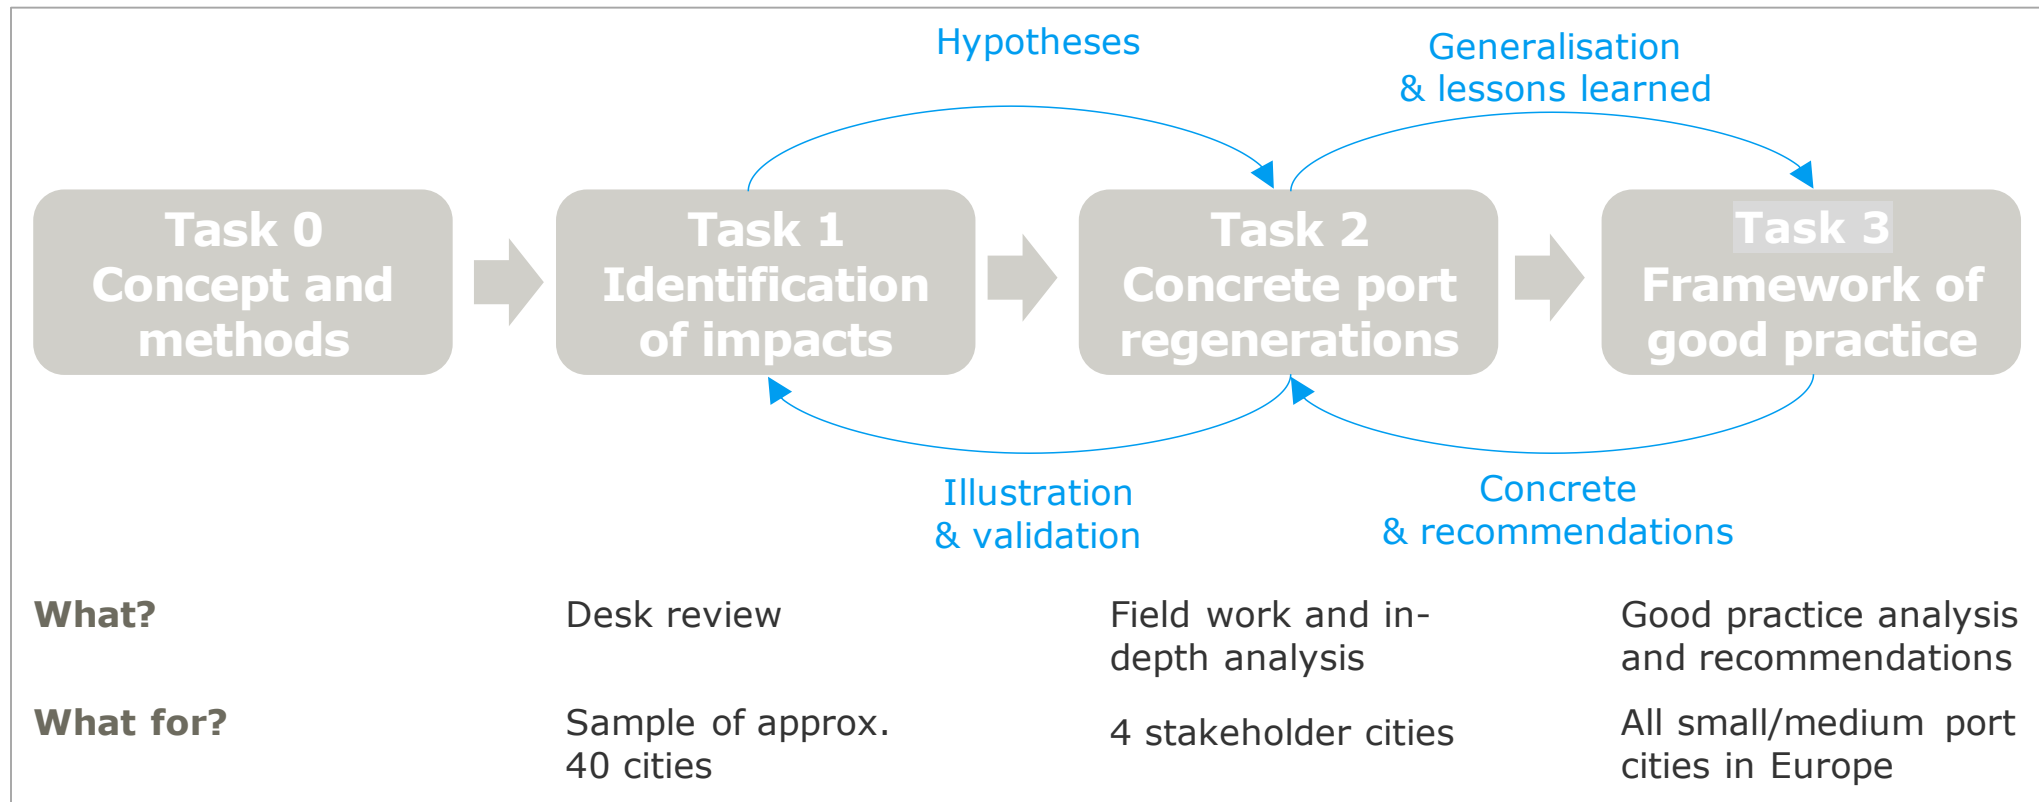

- Inception delivery: 4 February 2019
- Interim delivery: 23 April 2019
- Draft final delivery: 23 September 2019
- Final delivery: 23 December 2019

Lead service provider:

- Ramboll Management Consulting, BE

ENSURE – the big picture

Aalborg

Brest

Catania

Cork

ENSURE – innovative outcome

- Small and medium size port cities database
- Repository of examples of port cities regeneration
- Summary of regeneration trends and impacts
- Summary of regeneration impacts, risk and challenges
- In-depth case studies
- **A framework of good practice**
