

1 Smart Connectivity

objective

Develop a knowledge base as regards to understanding how digital transition and digital/green mobility solutions can help dealing with territorial challenges

focus

On digital cohesion, digital connectivity, transport and passenger mobility and accessibility, efficient public service organization via e-solutions in all types of places, especially in remote and with geo-specificities

policy

Strengthen knowledge, capacities and digital skills of policy makers in order develop appropriate digital strategies and improve solutions for smarter and more sustainable passenger and transport mobility

1

Moving forward with the public consultation (examples)

Topics for potential new research activities

examples

- Development of a methodology/tool to measure digital maturity of regional and local authorities
- Foresight studies to examine various scenarios of digital cohesion and resulting consequences
- Developing digital public administration-related solutions in small/ remote local authorities which face capacity issues
- Smart mobility solutions in post-covid times in rural areas and areas with geo-specificities
