

# 1 European territories in global interactions

1) to bring unique insights on economic transactions and industrial collaboration at subnational level and 2) to investigate the causal relationship between global interactions, regional policies and the regional economic performance.

Balance of payments (i.e. trade, credit and debit, development aid, workers' remittances, FDI and portfolio investment. Industrial collaboration to be considered in addition.

Defining which regional / local policy instruments maximize the benefit from current and capital transactions as well as the spillover effects from these, while at the same time reducing the risk of negative effects of foreign ownership in the region.

# 1 Moving forward with the consultation (examples)

## Topics for potential new research activities

examples

- Developing a methodological concept based on which, the subsequent empirical activities can be carried out, e.g. on modelling economic performance.
- Analysing all global transactions shaping the net income of European regions (i.e. balance of trade, net factor income from dividends and interest, net development aid and remittances).
- Examining capital ownership of European regions.
- Examining industrial collaboration of European regions.
- Analysing the effects of global interactions on regional economic performance, moderated by local policies.
- On-demand activities investigating, e.g. the outermost regions, interactions with the UK, Iberian links with South America or the Neighbourhood Instrument and activities of the NEXT programmes.
