

**ESPON YoungStars Seminar
„Create Europe“
30 & 31st of May, Ljubljana**

**Border Stories:
Symmetries and Asymmetries in the
Enlargement Area**

Gabriele **Tatzberger**, ÖIR - Work report from the ESPON
project 1.1.3 (Enlargement and Polycentrism)

Overview

- The 1.1.3 project
- Why border regions
- Coming to a border typology
- Components of border characteristics
- Mapping the typologies
- Next steps

Frame – 1.1.3 project

“Enlargement of the EU and the wider European Perspective as regards its polycentric spatial structure”

- thematic project

- Lead Partner: Swedish Institute of Technology (KTH),

- 9 project partners

Project duration: Jan. 2003 – Dec. 2005

Why border regions

- Increasing importance of border regions with enlargement 2004
- 30000 km European land border more than 16500 (more than 50%) can be found in the new member states.
- The length of internal land borders increased by 174% from EU 15 to EU 25

Coming to a border typology

- First attempt to deal with different situations in border regions in the enlargement area and to come to a typology
- There are many shortcomings (problems with data gathering,...) but it is a valuable exercise
- Results are a first attempt and not suitable to be used in a consequent way = appetizer
- Role of the typology is to show, how – with justifiable costs – a border regions typology could be developed
- Results show how different the border regions are

Components in border characteristics

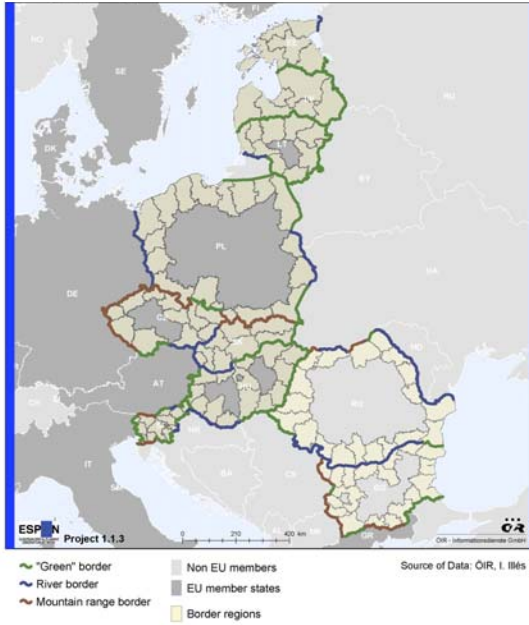

Area concerned:

„Enlargement area“ – new EU member states of 2004, RO and BG
118 border regions – NUTS 3 areas in enlargement area

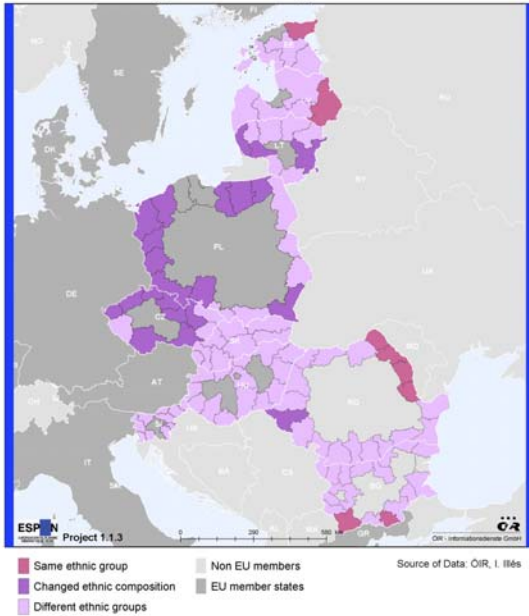

Components:

- Geographic type of borders
- Ethnic-historical types of border regions
- Density of border crossing points
- Dimension of economic disparities
- Intensity in transnational activities

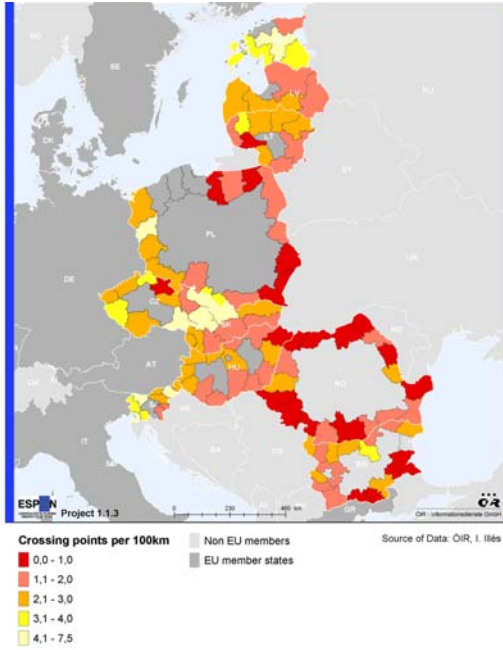

Component 1: Geographic type of borders

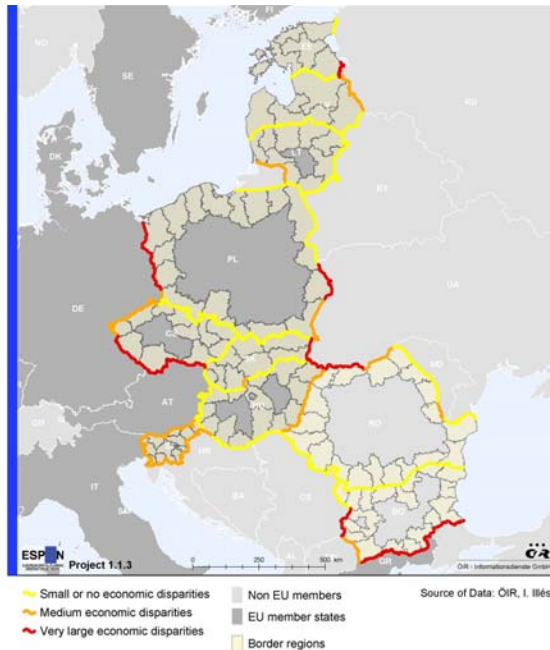

Component 2: Ethnic-historical types of border regions

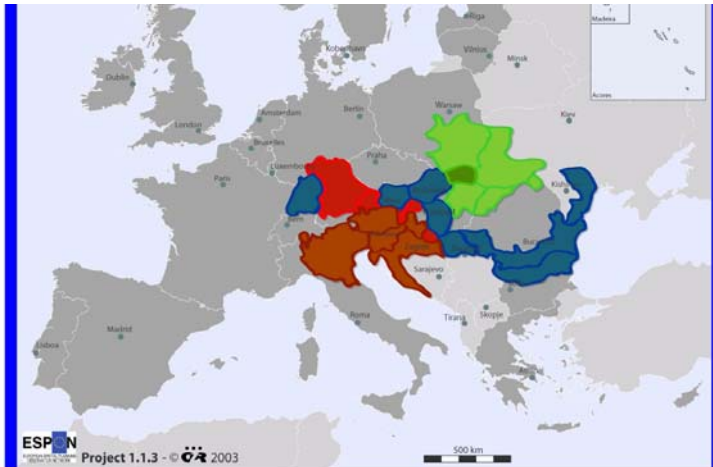

Component 3: Density of border crossing points

Component 4: Dimension of economic disparities

**Component 5: Intensity of transnational activities
- Members of Working Communities**

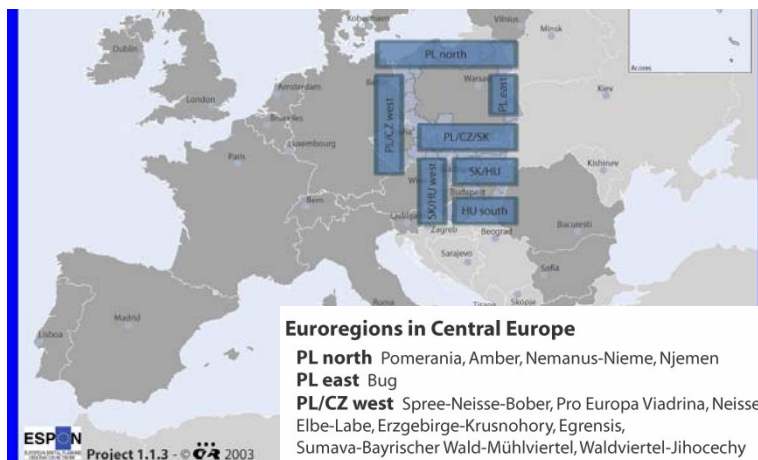

Member regions of transnational working communities

-  Danubian regions (Arbeitsgemeinschaft Donauländer)
-  Alpine-Adriatic regions (Arbeitsgemeinschaft Alpen-Adria)
-  Carpathian regions
-  Danubian and Alpine-Adriatic regions
-  Danubian and Carpathian regions

Geographical Base: Eurostat GISCO
Source of Data: ÓIR, I. Illés

**Component 5: Intensity of transnational activities
- Euregios in Central Europe**

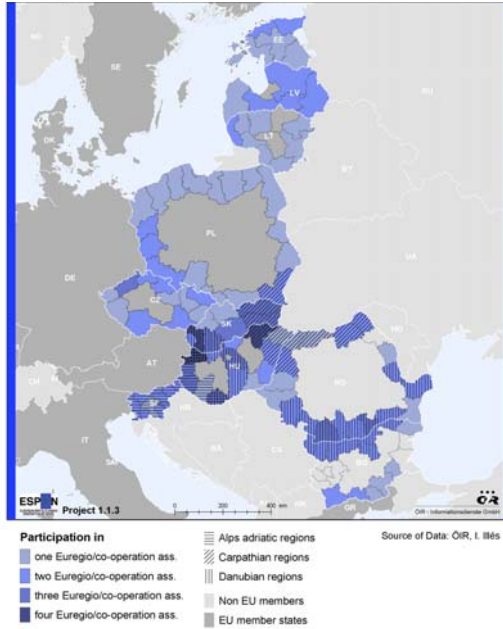

Euroregions in Central Europe

- PL north** Pomerania, Amber, Nemanus-Nieme, Njemen
- PL east** Bug
- PL/CZ west** Spree-Neisse-Bober, Pro Europa Viadrina, Neisse-Nysa-Nisa, Elbe-Labe, Erzgebirge-Krusnohory, Egrensis, Sumava-Bayrischer Wald-Mühlviertel, Waldviertel-Jihocechy
- PL/CZ/SK** Glacensis, Praded-Pradziad, Silesia, Tesin-Cieszyn, Beskidy, Tatry, Bilé-Biele Karpaty
- SK/HU west** Bratislava-Wien-Győr Sopron, Waldviertel-Pomoravie, West Pannonia, Drava-Mura
- SK/HU** Váh-Danube-Ipel, Ipoly-Ipel, Neogradiensis, Sajó-Rima-Slaná-Rimava, Kras-Karszt, Kosice-Miskolc
- HU south** Danube-Drava-Sava, Danube-Maros-Tisa, Bihar-Bihar

Geographical Base: Eurostat GISCO
Source of Data: ÓIR, I. Illés

Component 5: Intensity of transnational activities

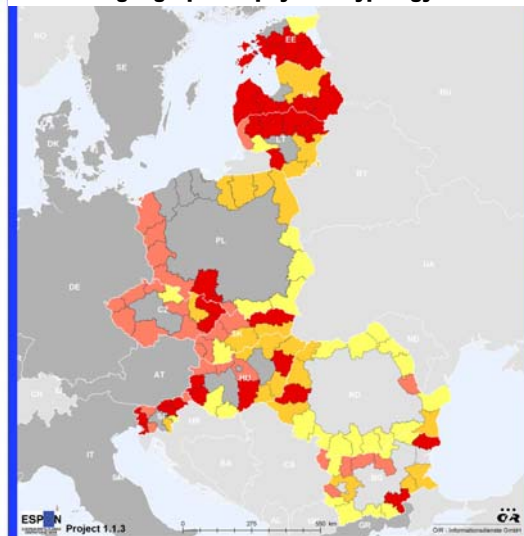

**Mapping the typologies:
Dimensions and criteria**

Dimensions	Criteria	
Starting Position	Density of border crossing points	Intensity of transnational activities
Potential Change	Geographic type of border	Economic disparities
	<i>... applied in version 1</i>	<i>... applied in version 2</i>

Border typology for integration potential Version 1: geographical-physical typology

Potential change	High: Green border	Low: Mountain / river border
Starting Position		
Good: High density of border crossing points	Forerunners of integration	Hardworkers of integration
Bad: Low density of border crossing points	Candidates of integration	Handicapped for integration

**Map 6: Version 1 (draft) border typology for integration potential
- geographical-physical typology**

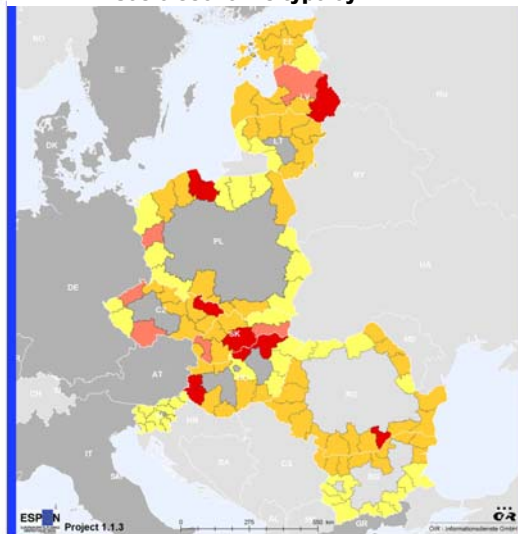

- Forerunners of integration
- Hardworkers of integration
- Candidates of integration
- Handicapped for integration
- Non EU members
- EU member states

Source of Data: OIR, I. Illés

Border typology for integration potential Version 2: socio-economic typology

Potential change	High: High economic disparities	Low: Low economic disparities
Starting Position		
Good: High number of transnational activities	Forerunners of integration	Hardworkers of integration
Bad: Low number of transnational activities	Candidates of integration	Handicapped for integration

**Map 7: Version 2 (draft) border typology for integration potential
- socio-economic typology**

- Forerunners of integration
- Hardworkers of integration
- Candidates of integration
- Handicapped for integration
- Non EU members
- EU member states

Source of Data: OIR, I. Illés

Next steps

- Analysis and summary of gathered data and designed maps
- Interpretation of the two typologies (with case studies)
- Deduction of future research questions – would like to give hints on how in an efficient way research should proceed in order to be useable for policy makers

Thank you for your attention!
